

Mauricio Valdés Cortés

3D ARTIST | TECHNICAL ARTIST | 3D GENERALIST

Santiago, Chile • (+56 9) 5128 2825 • mauri.valdes2002@gmail.com • Portfolio: <https://notasus.github.io/>

PROFESSIONAL PROFILE

3D Artist and Technical Artist with a dual background in Virtual Reality Engineering and a Bachelor's degree in Computer Science. My edge comes from combining artistic vision with engineering rigor: I work across the full art pipeline — Low/High Poly modeling, UVs, PBR texturing, rigging, and animation — while understanding in-engine performance, geometry/shader efficiency, and technical integration in Unity that keeps art and programming teams aligned. Able to turn complex visual requirements into functional, production-ready real-time assets.

TECHNICAL SKILLS & SOFTWARE

Art & 3D Pipeline: Blender (Low/High Poly modeling, UV mapping, rigging, animation, retopology), concept art

Engine: Unity (prefab integration, Shader Graph, particle systems, scene optimization)

Texturing & 2D: Adobe Photoshop, Adobe Illustrator, PBR (Physically Based Rendering) workflow

Technical Tools: C# (basic, in Unity), GitHub (version control), Technical English (documentation reading)

EXPERIENCE

3D Artist Intern | Newvicom, Santiago, Chile *Mar 2025 – Apr 2025*

- Full 3D pipeline: carried out the complete production process — sketch, modeling, UVs, PBR texturing, and prefab integration — delivering 100% of assets in Unity on schedule.
- Concept to prop: designed 3D props from client requirements, achieving first-pass approval and reducing revision cycles.
- Unity integration: packaged streamlined prefabs with material and shader assignment, speeding up in-engine setup.

3D Artist / Generalist | Personal Projects & Portfolio Development *2025 – Present*

- Asset development: ongoing creation of interactive 3D models, props, and environments built for real-time games.
- AI research & integration: applied generative AI tools to speed up early concepting and support creative workflows.

FEATURED 3D ART PROJECTS

3D Artist, Rigger & Animator | Advanced Animation Project *2024*

- Rigging & animation: modeled 2 low/mid-poly characters and built rigging/skinning systems free of visual artifacts, tuned for cinematic use.
- Delivery management: met 100% of planned milestones on a Gantt-chart schedule for a promotional trailer production.

3D Modeler | Client-Collaborative Project *2023*

- Organic modeling: co-designed and modeled a 3D organic character in a 5-person team, incorporating direct feedback from art direction.
- Geometry & UV refinement: adjusted geometry and UV maps for reliable real-time engine performance.

EDUCATION

Virtual Reality Engineering & Digital Game Design | Universidad Bernardo O'Higgins — 2021–2025

Bachelor's Degree in Computer Science | Universidad Bernardo O'Higgins — 2021–2025

CERTIFICATIONS & EVENTS

- Unity Anniversary Game Jam: rapid prototyping and development of a functional game in Unity over 72 continuous hours.
- Generative AI Course — Universidad de Chile & IT Vice-Rectorcy (2026).
- Interactive Narrative Training: scriptwriting, world-building, and rule/logic design for games.
